

AGRICULTURE

1. Esther purchases two acres of gently sloping land of growing large 5 variety of maize that prefer slightly alkaline condition. The upper part of his land some simple gully like depressions. The left part of his land dries out very fast while soil on the right has brown colour and very hard surface the. The lower part of the land is occupied with little stagnant water. She planted maize seed and plant emerged with purple leaves which left him wondering. An expert who conductor research in their land has pH of 2.5. The resulted into poor harvest.

Esther plans to grow the same crop the following season

Task;

Advice Esther on what should be done on his land to solve challenges he faced so that he can improve on maize production
