

Mathematics Questions and Answers

Question 1

Solve: If $2x + 1 = 11$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 2

Solve: If $2x + 2 = 12$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 3

Solve: If $2x + 3 = 13$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 4

Solve: If $2x + 4 = 14$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 5

Solve: If $2x + 5 = 15$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 6

Solve: If $2x + 6 = 16$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 7

Solve: If $2x + 7 = 17$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 8

Solve: If $2x + 8 = 18$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 9

Solve: If $2x + 9 = 19$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 10

Solve: If $2x + 10 = 20$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 11

Solve: If $2x + 11 = 21$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 12

Solve: If $2x + 12 = 22$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 13

Solve: If $2x + 13 = 23$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 14

Solve: If $2x + 14 = 24$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 15

Solve: If $2x + 15 = 25$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 16

Solve: If $2x + 16 = 26$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 17

Solve: If $2x + 17 = 27$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 18

Solve: If $2x + 18 = 28$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 19

Solve: If $2x + 19 = 29$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 20

Solve: If $2x + 20 = 30$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 21

Solve: If $2x + 21 = 31$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 22

Solve: If $2x + 22 = 32$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 23

Solve: If $2x + 23 = 33$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 24

Solve: If $2x + 24 = 34$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 25

Solve: If $2x + 25 = 35$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 26

Solve: If $2x + 26 = 36$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 27

Solve: If $2x + 27 = 37$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 28

Solve: If $2x + 28 = 38$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 29

Solve: If $2x + 29 = 39$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 30

Solve: If $2x + 30 = 40$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 31

Solve: If $2x + 31 = 41$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 32

Solve: If $2x + 32 = 42$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 33

Solve: If $2x + 33 = 43$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 34

Solve: If $2x + 34 = 44$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 35

Solve: If $2x + 35 = 45$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 36

Solve: If $2x + 36 = 46$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 37

Solve: If $2x + 37 = 47$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 38

Solve: If $2x + 38 = 48$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 39

Solve: If $2x + 39 = 49$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 40

Solve: If $2x + 40 = 50$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 41

Solve: If $2x + 41 = 51$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 42

Solve: If $2x + 42 = 52$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 43

Solve: If $2x + 43 = 53$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 44

Solve: If $2x + 44 = 54$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 45

Solve: If $2x + 45 = 55$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 46

Solve: If $2x + 46 = 56$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 47

Solve: If $2x + 47 = 57$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 48

Solve: If $2x + 48 = 58$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 49

Solve: If $2x + 49 = 59$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 50

Solve: If $2x + 50 = 60$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 51

Solve: If $2x + 51 = 61$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 52

Solve: If $2x + 52 = 62$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 53

Solve: If $2x + 53 = 63$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 54

Solve: If $2x + 54 = 64$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 55

Solve: If $2x + 55 = 65$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 56

Solve: If $2x + 56 = 66$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 57

Solve: If $2x + 57 = 67$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 58

Solve: If $2x + 58 = 68$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 59

Solve: If $2x + 59 = 69$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 60

Solve: If $2x + 60 = 70$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 61

Solve: If $2x + 61 = 71$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 62

Solve: If $2x + 62 = 72$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 63

Solve: If $2x + 63 = 73$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 64

Solve: If $2x + 64 = 74$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 65

Solve: If $2x + 65 = 75$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 66

Solve: If $2x + 66 = 76$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 67

Solve: If $2x + 67 = 77$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 68

Solve: If $2x + 68 = 78$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 69

Solve: If $2x + 69 = 79$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 70

Solve: If $2x + 70 = 80$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 71

Solve: If $2x + 71 = 81$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 72

Solve: If $2x + 72 = 82$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 73

Solve: If $2x + 73 = 83$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 74

Solve: If $2x + 74 = 84$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 75

Solve: If $2x + 75 = 85$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 76

Solve: If $2x + 76 = 86$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 77

Solve: If $2x + 77 = 87$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 78

Solve: If $2x + 78 = 88$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 79

Solve: If $2x + 79 = 89$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 80

Solve: If $2x + 80 = 90$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 81

Solve: If $2x + 81 = 91$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 82

Solve: If $2x + 82 = 92$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 83

Solve: If $2x + 83 = 93$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 84

Solve: If $2x + 84 = 94$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 85

Solve: If $2x + 85 = 95$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 86

Solve: If $2x + 86 = 96$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 87

Solve: If $2x + 87 = 97$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 88

Solve: If $2x + 88 = 98$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 89

Solve: If $2x + 89 = 99$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 90

Solve: If $2x + 90 = 100$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 91

Solve: If $2x + 91 = 101$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 92

Solve: If $2x + 92 = 102$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 93

Solve: If $2x + 93 = 103$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 94

Solve: If $2x + 94 = 104$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 95

Solve: If $2x + 95 = 105$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 96

Solve: If $2x + 96 = 106$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 97

Solve: If $2x + 97 = 107$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 98

Solve: If $2x + 98 = 108$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 99

Solve: If $2x + 99 = 109$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 100

Solve: If $2x + 100 = 110$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 101

Solve: If $2x + 101 = 111$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 102

Solve: If $2x + 102 = 112$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 103

Solve: If $2x + 103 = 113$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 104

Solve: If $2x + 104 = 114$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 105

Solve: If $2x + 105 = 115$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 106

Solve: If $2x + 106 = 116$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 107

Solve: If $2x + 107 = 117$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 108

Solve: If $2x + 108 = 118$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 109

Solve: If $2x + 109 = 119$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 110

Solve: If $2x + 110 = 120$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 111

Solve: If $2x + 111 = 121$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 112

Solve: If $2x + 112 = 122$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 113

Solve: If $2x + 113 = 123$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 114

Solve: If $2x + 114 = 124$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 115

Solve: If $2x + 115 = 125$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 116

Solve: If $2x + 116 = 126$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 117

Solve: If $2x + 117 = 127$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 118

Solve: If $2x + 118 = 128$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 119

Solve: If $2x + 119 = 129$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 120

Solve: If $2x + 120 = 130$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 121

Solve: If $2x + 121 = 131$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 122

Solve: If $2x + 122 = 132$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 123

Solve: If $2x + 123 = 133$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 124

Solve: If $2x + 124 = 134$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 125

Solve: If $2x + 125 = 135$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 126

Solve: If $2x + 126 = 136$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 127

Solve: If $2x + 127 = 137$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 128

Solve: If $2x + 128 = 138$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 129

Solve: If $2x + 129 = 139$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 130

Solve: If $2x + 130 = 140$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 131

Solve: If $2x + 131 = 141$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 132

Solve: If $2x + 132 = 142$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 133

Solve: If $2x + 133 = 143$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 134

Solve: If $2x + 134 = 144$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 135

Solve: If $2x + 135 = 145$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 136

Solve: If $2x + 136 = 146$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 137

Solve: If $2x + 137 = 147$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 138

Solve: If $2x + 138 = 148$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 139

Solve: If $2x + 139 = 149$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 140

Solve: If $2x + 140 = 150$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 141

Solve: If $2x + 141 = 151$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 142

Solve: If $2x + 142 = 152$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 143

Solve: If $2x + 143 = 153$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 144

Solve: If $2x + 144 = 154$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 145

Solve: If $2x + 145 = 155$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 146

Solve: If $2x + 146 = 156$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 147

Solve: If $2x + 147 = 157$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 148

Solve: If $2x + 148 = 158$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 149

Solve: If $2x + 149 = 159$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 150

Solve: If $2x + 150 = 160$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 151

Solve: If $2x + 151 = 161$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 152

Solve: If $2x + 152 = 162$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 153

Solve: If $2x + 153 = 163$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 154

Solve: If $2x + 154 = 164$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 155

Solve: If $2x + 155 = 165$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 156

Solve: If $2x + 156 = 166$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 157

Solve: If $2x + 157 = 167$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 158

Solve: If $2x + 158 = 168$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 159

Solve: If $2x + 159 = 169$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 160

Solve: If $2x + 160 = 170$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 161

Solve: If $2x + 161 = 171$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 162

Solve: If $2x + 162 = 172$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 163

Solve: If $2x + 163 = 173$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 164

Solve: If $2x + 164 = 174$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 165

Solve: If $2x + 165 = 175$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 166

Solve: If $2x + 166 = 176$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 167

Solve: If $2x + 167 = 177$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 168

Solve: If $2x + 168 = 178$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 169

Solve: If $2x + 169 = 179$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 170

Solve: If $2x + 170 = 180$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 171

Solve: If $2x + 171 = 181$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 172

Solve: If $2x + 172 = 182$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 173

Solve: If $2x + 173 = 183$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 174

Solve: If $2x + 174 = 184$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 175

Solve: If $2x + 175 = 185$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 176

Solve: If $2x + 176 = 186$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 177

Solve: If $2x + 177 = 187$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 178

Solve: If $2x + 178 = 188$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 179

Solve: If $2x + 179 = 189$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 180

Solve: If $2x + 180 = 190$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 181

Solve: If $2x + 181 = 191$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 182

Solve: If $2x + 182 = 192$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 183

Solve: If $2x + 183 = 193$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 184

Solve: If $2x + 184 = 194$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 185

Solve: If $2x + 185 = 195$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 186

Solve: If $2x + 186 = 196$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 187

Solve: If $2x + 187 = 197$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 188

Solve: If $2x + 188 = 198$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 189

Solve: If $2x + 189 = 199$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 190

Solve: If $2x + 190 = 200$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 191

Solve: If $2x + 191 = 201$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 192

Solve: If $2x + 192 = 202$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 193

Solve: If $2x + 193 = 203$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 194

Solve: If $2x + 194 = 204$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 195

Solve: If $2x + 195 = 205$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 196

Solve: If $2x + 196 = 206$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 197

Solve: If $2x + 197 = 207$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 198

Solve: If $2x + 198 = 208$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.

Question 199

Solve: If $2x + 199 = 209$, find x .

Answer

$2x = 10$, therefore $x = 5.0$.
